Hailiang Xie (Preferred name: Liam)

San Diego, CA · hax067@ucsd.edu · (213) 713-7678 · github.com/hyliumx

SUMMARY

Computer Science student at UC San Diego interested in robot learning, SLAM, and machine learning algorithms, including imitation learning and reinforcement learning. Previously founded and operated a data collection services company for five years, executing image, video, and speech data collection projects for AI clients across more than nine countries.

EDUCATION

University of California, San Diego Sep 2026 – Jun 2028 (expected)
B.S. in Computer Science · Warren College *La Jolla, CA*

- Current coursework (Fall 2026): Mathematics for Algorithms and Systems (CSE 21), Systems Programming and Software Tools (CSE 29), Introduction to Robotics (CSE 276A).
- Relevant transfer coursework: Linear Algebra, Multivariable Calculus, Differential Equations, Discrete Mathematics, Data Structures, Computer Organization.

EXPERIENCE

Data Analysis Fellow Sep 2026 – Present
UCSD Neuroscience Graduate Program *La Jolla, CA*

- Perform administrative data analysis for the graduate program.
- Building a data dashboard for NIH-related program data.

Founder & Executive Director Dec 2024 – Mar 2026
The Biling Organization *California*

- Founded a nonprofit providing free phone-based language support to immigrants with limited English proficiency, helping approximately 80 families communicate with hospitals, schools, and government agencies.
- Recruited, trained, and coordinated bilingual volunteers to provide real-time interpretation and community assistance.
- Built and managed a cloud-based call center using Amazon Connect to connect community members with available volunteers.

Founder & CEO Oct 2017 – Sep 2022
AI Data Services Company *Beijing, China*

- Founded and operated a company executing image, video, and speech data collection and annotation projects for machine-learning clients.
- Delivered projects for smartphone manufacturers, automotive companies, and AI solution providers across more than nine countries.
- Managed sales, international operations, project delivery, vendors, and distributed data-collection teams.
- Closed the company in 2022 and returned to college to pursue formal computer science training.

PROJECTS

Self-Study: Stanford CS231n (Deep Learning for Computer Vision) 2026 – Present

- Completed Assignment 1, implementing an image classification pipeline from scratch in NumPy, including k-NN, linear classifiers, and a two-layer neural network.
- Continuing with the remaining assignments (in progress).

Egocentric Video Data Collection Exploration 2026

- Evaluated a head-mounted smartphone setup for an egocentric video data-collection effort through an industry collaborator working on a robotics data project.
- Explored sourcing and deployment options for data collection in Argentina and conducted an initial hands-on collection test.

TECHNICAL SKILLS

Programming: C++, Rust, Java, Python, x86 Assembly
Machine Learning: PyTorch (self-study in progress)
Areas of Interest: SLAM, Robot Learning, Imitation Learning, Reinforcement Learning, Machine Learning
Languages: Mandarin Chinese (native), English
